

CarboMet

Metrology of Carbohydrates of Enabling European Bioindustries Newsletter August 2019

[GlycoAlps International Workshop “On the future of glycoscience”](#)

A key note lecture was given by Rodney Townsend focussing on the challenges of the European bioeconomy and how CarboMet initiatives can help achieve some of the targets by 2030. Please click [here](#) for more information.

[Have your say for Horizon Europe research framework](#)

CarboMet is currently conducting a survey to prioritise research areas across the four BIS. The information will be used in policy papers and for the next European glycoscience roadmap. Survey can be found [here](#).

[CarboMet in EuroCarb 2019](#)

Prof. Sabine Flitsch gave a keynote lecture on the funding landscape in Europe. The talk focussed on CarboMet activities and funding opportunities in Europe in addition to current challenges in glycoscience which require further investments. Access to the slides can be found [here](#).

[The Human Glycome project – Glycoenzymes in glycoengineering](#)

The Human Glycome Project (HGP) is led by a consortium of research groups that shares a common goal of aiming to define the structures and functions of human glycoconjugates. Prof. Sabine Flitsch gave an inspiring talk on engineering glycans in biopharmaceuticals using enzymes. You can find the link to the talk [here](#).

[4th World Conference on Congenital Disease of Glycosylation \(CDG\)](#)

CarboMet attended the CDG conference held between July 26th-27th in Lisbon. Jointly organised by patients and professionals, the conference highlighted some of the challenges in diagnosing CDG and developing therapies to manage the disease. More information can be found on the CDG [website](#).
